

ABSTRACT

A sheet package ~~9-package~~ in accordance with the present invention includes ~~sheets 7~~ sheets as print mediums for a printer and a package ~~member 8-member~~ surrounding the ~~sheets 7-sheets~~ which have been stacked up. The sheet ~~package 9-package~~ is configured so that the ~~sheets 7-sheets~~ can be set in the printer together with the package ~~member 8-member~~ exposing part of the ~~sheets 7-sheets~~. The package ~~member 8-member~~ is integrally provided with a flap ~~part 44-part~~ which can expose part of the ~~sheets 7-sheets~~ by being opened when the sheet ~~package 9-package~~ is set in the printer and cover the exposed part of the ~~sheets 7-sheets~~ by being closed when the sheet ~~package 9-package~~ is not used.
